Rodney Blackmon

Project System and Execution Strategy Manager

As Project System and Execution Strategy Manager, Rodney Blackmon is responsible for development of strategic Initiatives, complex-wide integration activities, continuous process improvements, and implementation of performance assurance measures.

In this role, Mr. Blackmon leads the full cycle of Strategic Planning and Implementation activities: development of the Plan, identification of implementation milestones, establishment of balanced scorecards, and performance measuring and monitoring. These efforts establish long-range plans meeting contract requirements, and integrate cross-functional groups to provide the U.S. Department of Energy (DOE) with systematic solutions to complex issues. These solutions include development and implementation of cutting edge business programs, such as Lean management and business metrics. As part of his responsibilities, Mr. Blackmon routinely meets with clients, contractors, and stakeholders in delivering the contractual mission.

Mr. Blackmon has specialized in establishing Planning and Integration (P&I) organizations emphasizing optimization and continuous process improvement business techniques to drive cultural change and improve operations. His background includes roles leading various elements within a P&I organization: Project Controls, Risk Management, Funds Management, Prime Contracts, Continuous Process Improvement and the Project Management Office.

Mr. Blackmon most recently completed a temporary assignment standing up the Planning and Integration organization for the Waste Isolation Pilot Plant as part of the recovery efforts from the 2014 events.

Before returning to SRS in 2010, he was Project Planning, Monitoring, and Analysis Manager for Washington River Protection Systems at Hanford, where he developed and implemented project reporting tools to ensure the Earned Value Management System (EVMS) was implemented and utilized. Also at Hanford, he was the Technology Risk Manager for the Waste Treatment Plant Project.

Mr. Blackmon was the Project Controls Manager for a \$400 million line item construction project at the Idaho National Laboratory. He led the EVMS certification effort for the project and managed the project controls group through the CD-3 milestone.

During his time with Savannah River Remediation, Mr. Blackmon led the successful certification effort for the EVMS, implementation of business metrics as a standard practice, and numerous proposals for contract modification including supplemental salt and contract alignment.

Mr. Blackmon is a Certified Project Management Professional.

He and his wife, Tina, reside in Aiken County, South Carolina.
