

Tom Foster

President and Project Manager

As Savannah River Remediation (SRR) President and Project Manager and AECOM Group Vice President, Tom Foster oversees a complex, integrated set of Savannah River Site (SRS) liquid waste facilities that are connected to virtually every SRS mission involving nuclear materials.

Mr. Foster directs all areas of the liquid waste disposition program. These facilities include removing high-level waste from the large underground waste storage tanks at SRS and turning the waste into a safe, immobile glass form. He also oversees removal of low-level radioactive materials from the tanks, safe demonstration of new technologies for the treatment and disposition of waste, and operational closure of the waste tanks.

Mr. Foster has more than 35 years of experience in the nuclear industry, leading efforts in decommissioning, operations, project management, and engineering. His most recent assignment was serving as the Chief Decommissioning Officer at the Sellafield site in the United Kingdom. Mr. Foster's leadership and management abilities are exemplified by his work at the Sellafield site where he successfully broke down institutional and technical barriers in leading and integrating a \$930M per annum decommissioning portfolio that includes legacy nuclear waste handling, storage, processing and treatment facility construction, startup, testing, operations, and optimization. In FY 2014, he completed 17 of 17 milestones that reduced risk by removing legacy waste and progressing projects enabling future retrievals.

He has held other roles at Sellafield, including Waste and Effluent Disposition Director, in which he completed vitrification of all high-active waste held in the UK for repatriation to foreign utility customers. Previously, Tom was also Head of Programme for the Pile Fuel Cladding Silo and Director of Waste Retrievals.

Prior to joining Sellafield, Mr. Foster was Director of Remediation for the River Corridor Cleanup project at Hanford, Washington. Prior to working at Hanford, Mr. Foster spent 27 years at SRS, holding a number of senior management appointments, mostly in the Tritium facility. Other previous SRS positions include Deputy Chief Engineer Defense Programs and various Operations Management positions.

Education

- Florida State University
Bachelor of Science Degree
in Chemistry
