Savannah River Remediation: Educational Outreach

Savannah River Remediation (SRR) believes success starts with today’s future. It is a priority at SRR to influence and support students of all ages by providing educational opportunities to gain a more hands-on experience, both inside and outside of the classroom, particularly in the Science, Technology, Engineering, Arts, and Math (STEAM) curricula.

While SRR offers learning experiences in all fields of knowledge, the technology-based company recognizes that fewer students are pursuing math and science-related careers. SRR believes that financial support for teachers and students in these fields can help reverse the trend in order for the company, and our country, to remain competitive.

SRR starts at the foundation of education with elementary students and educators. SRR offers teachers grants to purchase the materials and supplies necessary to provide exciting, hands-on learning opportunities. SRR awards these grants to help teachers provide creative and innovative experiences for their students.
At the middle and high-school level, the company continues to focus on STEAM curriculum assistance. At the collegiate level, SRR has taken steps to strengthen ties with many colleges and universities in South Carolina and Georgia, as well as offering opportunities to other colleges. Helping students prepare for careers, particularly in STEAM, is provided in the form of scholarships, funds for critical STEAM-related equipment, mentorship opportunities for students and development sessions with SRR executive staff.

SRR is the Liquid Waste contractor at SRS, which is owned by the U.S. Department of Energy. SRR is composed of a team of companies led by AECOM with partners Bechtel National, Jacobs, and BWX Technologies, Inc.
